

STRATEGIES

BALANCED ECOLOGY

Sustaining significant interventions and engaging community in environmental protection and conservation

Protection of local economy and people from the threat of disasters

Strengthen disaster preparedness and mitigation efforts by synchronizing our programs with the national government

ENHANCED AGRI-AQUACULTURE

Raise the competitiveness
of the agriculture sector
and graduate from
subsistence farming

Give due emphasis on agri-
business and its successful
integration to the value
chain

USTAINABLE TOURISM

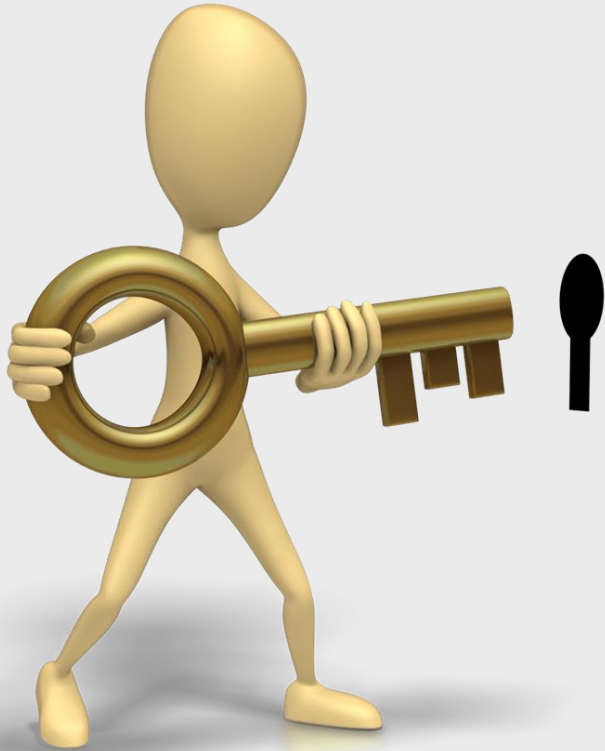

Promoting Davao del Norte
as the perfect alternative
destination in this part of the
world

Pursuing community-based
tourism initiatives that will
increase income of each
family in the locality

TTRANSFORMATIVE LEADERSHIP

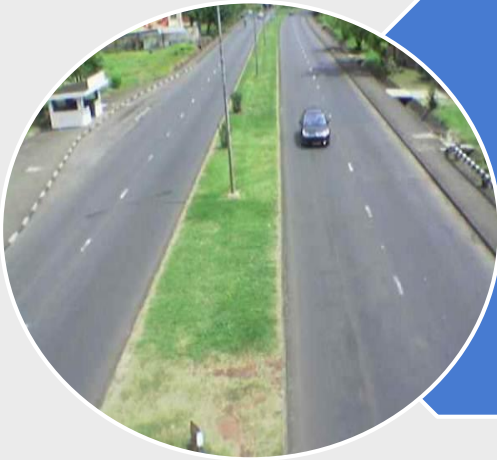

The transformational leader has the key to unlock “*what is*” in order to discover “*what can be*”!

Leaders who are willing to do what it takes for the good of the people, not for popularity or for vested interests.

Leaders who can transcend from simply being a service provider to an enabler.

Leaders who have the dynamism, competence and commitment to fulfill their mandate to serve beyond self and beyond politics

PUBLIC INFRASTRUCTURE

Opening more transportation valves to facilitate interconnectivity and to prepare our province from receiving the full pressure of industrial traffic from all points of Mindanao.

New Infrastructure

EDUCATION AND SPORTS

Further beef up the scholarship program to attune its objectives also on skills-based demand of the global market

Strengthening coordination and collaboration between and among national line agencies and local government in sports development.

Forging partnership with the civil society organizations, particularly with the sports associations, academic and business sector, so that a holistic approach is achieved in sports development.

PTIMUM HEALTH AND SOCIAL SERVICES

Sustain quality health care and social services to improve the quality of life of all Dabaonons

Strengthening the capacity and capability of health and welfare services facilities and fortify the Service Delivery Network (SDN)

Build on the gains of the Universal Philhealth coverage and beef up social services to guarantee each Dabaonon a life of dignity

PUBLIC –PRIVATE PARTNERSHIP

Capitalize on the immense financial strength of the private sector in delivering public goods and services both in small-scale and large-scale approaches.

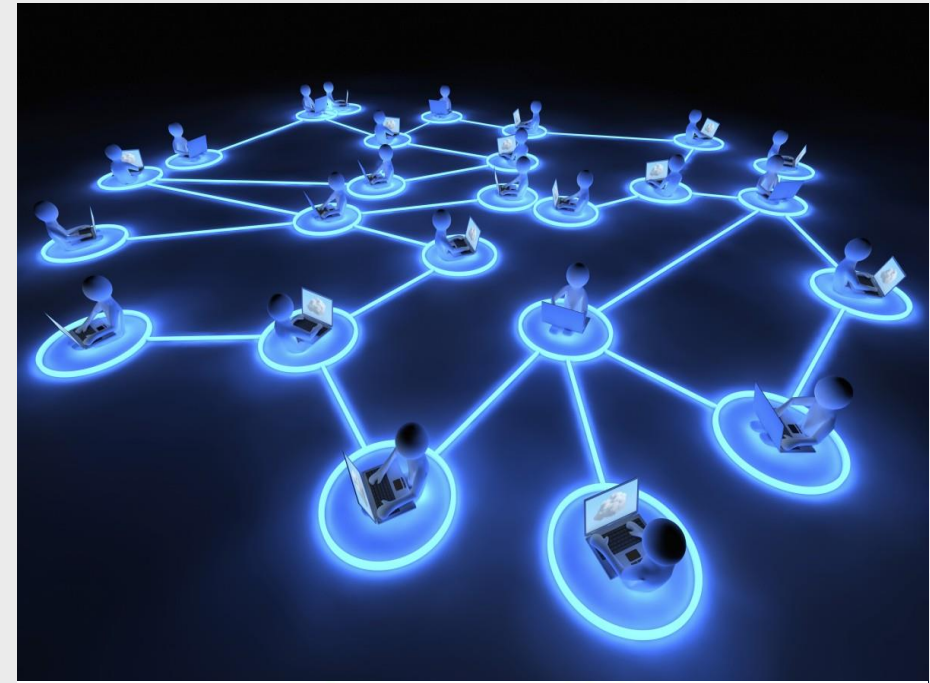

Strengthen mechanism to entice more private investors, both local and foreign, to invest in areas like public health, public infrastructures, transportation, education, and housing facilitation.

LINK TO THE WORLD

Opening digital infrastructures to facilitate inter-connectivity within, as well as, to and from the Province

Pursue efforts for Davao del Norte to be known as the “Province of Best Stories” not just in the local and national levels but more importantly, worldwide

Unify and standardize systems, processes and procedures to hasten facilitation of public transactions.

EMPLOYMENT AND LIVELIHOOD OPPORTUNITIES

Nurture the vibrant services sector and invite more players to come by revisiting the provincial investment policies and make them a deliberate come-on tool

Strengthen livelihood program by harnessing the local human, social, financial and natural capital to make it at par with the best practices in the country.

Push for MSME development by providing better access to financing and product and skills development to enable them to compete with domestic and international players

AGRICULTURE

Environmental Impacts of Open-Ocean Aquaculture

Fish Meal & Fish Oil

Using wild-caught fish to feed farmed fish puts additional pressure on these populations and can impact other wildlife that depends on them for food.

Drugs & Chemicals

When used, antibiotics, pesticides, and other chemicals flow out of pens and can affect wild fish as well as the broader marine ecosystem.

Escaped Fish

Escaped fish compete for food and habitat, transmit diseases, and prey on and breed with local fish, reducing the health of wild populations.

Diseases & Parasites

Disease, pathogens, and parasites can multiply in crowded pens and rapidly spread to wild fish.

Fish Waste

Fish waste flows out into the ocean, adding potentially harmful extra nutrients to the ecosystem. Uneaten food can also build up on the ocean floor underneath pens, altering the abundance and biodiversity of these communities.

Predators

Seals, sea lions, sharks, birds, and other marine wildlife can become entangled in fish pens. The use of deterrents like underwater loudspeakers can alter the natural behavior of predators.
